

# DETEX<sup>®</sup>

WITH BIOMARKER

## NON-TOXIC MONITORING BAIT

### PRODUCT FEATURES

- ✓ **Biomarker**
  - Special additive visible under blacklight
  - Easily detected in rodent faeces
- ✓ **Non-Toxic**
  - Contains no active ingredient
- ✓ **Highly Palatable**
  - Formulated with more than 15 human food-grade ingredients

### PRODUCT ATTRIBUTES

- ✓ **Sensitive Accounts**
  - Use to monitor rodent activity in schools, food accounts, etc.
- ✓ **Tracking/Monitoring**
  - Easily track rodent movement and identify harbourage areas
- ✓ **Pre-baiting**
  - Helps ensure fast acceptance of rodenticide when used as a pre-bait

THE WORLD LEADER IN RODENT CONTROL TECHNOLOGY

# USES FOR **DETEX**<sup>®</sup>

WITH BIOMARKER

## HOW TO USE BIOMARKER WITH AN IPM PROGRAM

### STEP 1

- Apply Detex with Biomarker as a monitoring bait (inside and out) to determine rodent activity and points of entry.

### STEP 2

- Once rodent pathways and harbourage areas have been identified, place control measures at points of highest activity.

### STEP 3

- Once rodent infestation is taken care of, replace control measures with Detex with Biomarker to monitor for future problems.

## BIOMARKER APPLICATIONS

### RODENT TRAVEL & PATHWAYS

- Simplified identification of rodent pathways should aid in proper placement of control measures.
- Areas to rodent proof can be better identified because of converging pathways or paths that disappear.

### INBOUND PALLET INSPECTION

- Inspecting inbound pallets will become more accurate by enhanced visibility of droppings.
- Detex with Biomarker can be used upstream in the supply chain to ensure accuracy at receiving ports.

### SPECIES IDENTIFICATION

- Droppings in the surrounding ground cover should more easily be found to determine the type of rodent infestation.
- Infestation size will be more easily determined based on dropping counts.
