

*Finally... a fully featured  
ULV machine that's affordable!*

# *}}}} The Portable Aerosol System*

- » Stainless steel and brass valve
- » Child resistant lock
- » Rugged carry case
- » 12 ft. recoiling hose
- » 8" or 18" stainless steel extension and tip

## *}}}} You asked - We listened*

The new P.A.S. (Portable Aerosol System) ULV machine gives you deep wall void penetration, crack and crevice application, and localized fogging capabilities while saving you up to 50% over competitive models. The extensively field tested P.A.S. ULV machine elevates your application technology significantly while giving you superior control over tough pest problems. You can even remove your P.A.S. from its case and away from the air source for spot treatments.

## *}}}} Air - Liquid - Aerosol ... choose your delivery method*

The P.A.S. ULV machine puts you in control of output type. Select air only, liquid only, or aerosol. The compressor driven system easily drives air and pesticides deep into wall voids where pests live. Liquid pressure is adjustable to allow you to adjust the P.A.S. from a fog to a heavy mist type spray. Use the air/liquid combination to treat hard to reach areas like box springs, wall voids, under equipment, and behind fixed objects like headboards in hotels. Use the liquid only feature to treat locations such as under baseboards where liquids only may be more appropriate.

## *}}}} Built for years of dependable Service*

Your P.A.S. ULV machine is delivered complete in its own rugged carry case to protect it during routine service calls. All components are mounted inside to reduce damage and downtime. The 8" extension model allows you to store your wand extension inside the case. The 18" extension model has convenient clips on top to store your wand. No need to send your unit back for repairs, the P.A.S. is field repairable.
